

FINAL THESIS

Credits: 15,0 ECTS

Brief description of contents:

The Final Master's Degree Thesis will be carried out individually. It will be written and defended orally before a panel of examiners (Doctors). It will consist of a research project in the Oceanography area of study, which synthesises and integrates the competences acquired during the course.

The student will carry out the work, while being supervised by a professor Doctor of the Master's Degree. The work director can be a professor external to the Master's Degree, in which case it will be necessary to name a co-director from the professor Doctors of the Master's Degree.

Each year different lines of research are offered by the professors/supervisors of the Master's Degree, and the students must choose one of these for the development of their Final Master's Degree Thesis. The work topics must be approved by the Master's Degree Academic Committee before they are carried out.

Students will be able to do their Final Master's Degree Thesis in the following broad areas of study:

- Biological oceanography
- Physical oceanography
- Chemical oceanography
- Geological oceanography
- Other disciplines related to the marine environment and which are within the subjects taught during the Master's Degree.

Evaluation system:

SYSTEM	WEIGHT
Written projects and reports	60 – 80
Presentation of exercises, topics and projects	20 – 40
